

Specification on Packaged Units of Type III Barricades

Special Instructions: The vendor whose bid is awarded will package all components used in the Type III Barricade together as a single unit. Each unit should contain three boards with sheeting applied, feet and uprights, and necessary hardware for mounting. Boards will be slip sheeted to prevent reflective sheeting being damaged. Finished unit of issue will be banded together for shipment and labeled as to whether it is a right or left barricade.

Items not packaged in this manner will not be received and will be the responsibility of the vendor for transportation costs incurred and/or returned.
